

Frequently Asked Questions

The Forum has a search function, but nobody seems to use it, so here are answers to often-asked questions that people would have found if they'd searched for them:

What files do I need to submit? (i.e. include in my `ass2.zip`)

In theory, the only files you need to modify to complete the assignment are `query.c`, `reln.c` and `tuple.c`. You only need to submit these files. If you modified any other files, submit them as well.

Does my `tupleHash()` function need to include the `printf()` statement in the supplied version of `tupleHash()`.

We'll get the hash values using a custom version of `dump.c`.

Your `tupleHash()` function does not need to print anything. If it does, we'll ignore what you print.

Do I need to `#include <math.h>` so that I can use the `pow()` function.

I assume you want to use it to compute 2^n . DO NOT use `pow()` to do this. It is over-the-top for this, and there are *much* more efficient ways to compute 2^n .
